

## Aidon Environmental Policy

Aidon's approach to systematic Environmental management is based on key clauses of the ISO 14001. Aidon's focus is on continual improvement of its Operational System which includes the Environmental management and Environmental performance. We strive to reduce our own environmental impact.

We contribute to eco-efficiency and environmental stewardship in the communities and countries where we operate. Our core businesses offer energy-efficient systems, products, and services, which enable our customers to lower their use of energy and natural resources.

Environmental management is one of our highest business priorities and we are committed to:

- Conducting our operations in an environmentally sound manner by applying environmental management systems, such as ISO 14001, in all our operations and by applying environmental principles, such as commitment to continual improvement, legal compliance and awareness training of employees, in all our operations
- Promoting environmental responsibility along the value chain by encouraging suppliers, subcontractors, and customers to adopt international environmental standards
- Developing our manufacturing processes with focus on energy and resource efficiency
- Developing and marketing products and systems which are resource efficient and facilitate use of renewable energy sources
- Including environmental aspects in the risk assessment of major customer projects

We are committed to setting and reviewing environmental objectives and targets for both long-term and short-term that are ambitious and above legislative requirements.

Tommi Blomberg, CEO
